

Installing the Martin Audio Netcontrol software (MS Windows)

Clicking [HERE](#) takes you to a zip folder containing the installer software. Extract the contents to a suitable place on your pc – your desktop is a good place as the setup file may be deleted once you have installed the wizard.

Do not run the programme from the zip folder.

Run ***MA netcontrol_installer-1.2.0.exe*** and follow any on-screen instructions.

This programme monitors performance and control parameters of Martin Audio MA4.8Q and MA6.8Q amplifier networks.

[**Click here for the MA4.8Q & MA6.8Q operation manual**](#)

The PC should be connected to an MA NET1; NomadLink-to-Ethernet bridge, using standard TCP/IP communication.

[**Click here for the combined MA-Net1/MA Netcontrol operations guide**](#)

1. PC Recommendations:

- Windows 2000 or XP
- Intel Pentium 4, 1 GHz
- Minimum 512 Mb of RAM
- 20 Mb of free space on Hard Drive
- 800 x 600 resolution with minimum 24 bit color
- Ethernet card (10 Mbit/100 Mbit)

2. Network setup

Connect only one PC running one instance of MA Netcontrol to one or more MA NET1's.

When MA Netcontrol is running and connected to one or more MA NET1's, the front- and rear-panel operation of the MA NET1's will be locked for operation.

3. Network Connections

Connect your PC and MA NET1 network using standard Ethernet components, such as RJ45 cables and switches.

If set up as a peer-to-peer network with one PC and one MA NET1, use a crossed Ethernet cable (supplied with the MA NET1).

Up to 16 NLB60E's can be connected to and controlled from DeviceControl.

The IP address of the PC and MA NET1's must be in the same number range.

The subnet mask must be identical on the PC and the MA NET1's.

If the PC and MA NET1's are connected to a network with a DHCP server, both PC and MA NET1's may have DHCP turned on obtaining IP address automatically
